# Global Asset Tracking

Remote GPS and fluid level monitoring for fixed and mobile tanks

**16+ years**
in business

**6,000+**
devices deployed

# Who we are

Global Asset Tracking is an Australian company that has supplied remote GPS location and fluid level monitoring for more than 16 years. Our customers in mining, oil and gas, agriculture and water treatment know how much their tanks hold, and where they are, without a site visit to find out. Just as important is the support behind every unit.

**16+**
years in business

## Where we operate

Our monitoring covers tanks in Australia, the United States, South Africa and Asia, among other locations. There is no restriction on where a tank can be monitored.

# What we provide

Behind every unit is a team that answers when you need help. Our support is the main reason customers stay with us. We aim to be the best of the best, with a dedicated, trained team on live chat during business hours, every email answered within one business day, and phone lines that are always open.

### Level and location monitoring

Each unit reports tank fluid level and GPS location, for fixed and mobile tanks.

### Automatic connectivity

Units select between 4G and satellite automatically, so a remote site is no barrier to getting data.

### Our own reporting platform

Readings are delivered through LevelTrack, built in-house, with a daily level report sent by email.

### Your branding, your customers' view

Reports can carry customer branding, and each sub-customer sees only their own tanks.

### Custom engineering

Bespoke hardware and software integration projects on request.

# Industries we serve

**Mining**

**Oil and gas**

**Agriculture**

**Water treatment**

## Talk to us

If you manage tanks across remote or multiple sites, we would welcome a conversation. Our dedicated support team will look after you from your first enquiry.
